Letter of Completion

To Whom It May Concern,

This is to certify that Akhil K. successfully completed his engagement with Namma Truck, a production-grade on-demand logistics platform, in the role of Software Engineer.

During his time with us, Akhil contributed to the development of a full-scale logistics ecosystem consisting of multiple applications, including customer and driver mobile apps, an admin dashboard, and a scalable backend system. He was actively involved in backend and mobile development, working with technologies such as NestJS, PostgreSQL, Prisma ORM, Redis, BullMQ, Flutter, and real-time communication systems.

Akhil worked on designing and implementing APIs, integrating real-time tracking and background job processing, and contributing to payment and payout workflows. He demonstrated strong technical competence, responsibility, and the ability to work effectively on complex, real-world systems.

Throughout his engagement, Akhil was professional, dedicated, and met expectations assigned to him. We wish him the very best in his future academic and professional endeavors.

Sincerely,

A handwritten signature in black ink, appearing to read "Raj Kumar K".

Letter of Recommendation

To Whom It May Concern,

I am pleased to recommend Akhil K., who worked with us on the Namma Truck logistics platform as a Software Engineer. During his tenure, Akhil demonstrated exceptional technical depth, ownership, and the ability to design and ship production-grade systems at scale.

Namma Truck is a full-fledged on-demand logistics platform consisting of multiple applications, including customer and driver mobile apps, an admin dashboard, and a scalable backend system. Akhil played a key role in building and integrating critical parts of this ecosystem.

On the backend, Akhil worked extensively with NestJS, PostgreSQL, Prisma ORM, Redis, BullMQ, and real-time communication mechanisms. He was involved in designing and implementing a large number of APIs powering the platform, handling complex business logic such as driver assignment, real-time tracking, and payments. His understanding of backend architecture, data modeling, and performance considerations was well beyond what is typically expected at his experience level.

One of Akhil's notable contributions was in implementing real-time systems, including live GPS tracking using Server-Sent Events and sockets, and efficient driver discovery using Redis geospatial indexing combined with background job processing through BullMQ. These systems were designed with scalability and reliability in mind and performed well under realistic production constraints.

On the mobile side, Akhil worked with Flutter and Riverpod, contributing to features such as real-time updates, offline handling, and seamless API integration. He showed strong judgment in managing state, handling edge cases, and ensuring smooth user experience even under unreliable network conditions.

Beyond his technical skills, Akhil consistently demonstrated strong ownership, problem-solving ability, and independence. He was proactive in identifying issues, proposing architectural improvements, and taking responsibility for end-to-end feature delivery rather than limiting himself to assigned tasks.

Overall, Akhil proved himself to be a highly capable and reliable engineer who can contribute meaningfully to complex, real-world systems. I am confident that he will be a valuable asset in any software engineering role, particularly in environments that value strong fundamentals, scalability, and real-world impact.

I strongly recommend Akhil K. without reservation.

Sincerely,

Raj Kumar K
